

SPECIFICATION SHEET

Ingredient intended for the manufacturing
of aquaculture feed

Description

ME-PRO® is a non-GM plant-based protein ingredient produced as a light-colored and free-flowing powder. ME-PRO is highly digestible 70% crude protein (as fed) and also has a highly available phosphorous content. The processing of soybean meal occurs with a naturally occurring, non-toxicogenic, and non-pathenogenic microbe; this microbe is commonly used in the production of food ingredients such as pullulan gum.

ME-PRO has been extensively tested both in laboratory and commercial settings, with inclusion rates ranging from 15-40% of the dry diet with outstanding results in a wide variety of marine and freshwater species of fish and shrimp, including reduced feed conversion rates, and reduced phosphorous discharge levels.

ME-PRO is derived from traceable sources of non-GM soybeans grown in the United States. The production of ME-PRO is completed in the company's manufacturing facilities in Brookings and Volga, South Dakota.

Data obtained from Pilot Facility

Typical Composition (%)		Amino Acid (g/100g)	
Crude Protein (dry matter)	75.60	Alanine	3.43
Crude Protein (as fed)	73.40	Arginine	6.04
Moisture	4.50	Cystine	1.01
Crude Fat	0.85	Glutamic Acid	14.02
Crude Fiber	5.40	Glycine	3.28
Ash	1.30	Histidine	2.10
		Isoleucine	3.72
		Leucine	6.84
Minerals		Lysine	4.90
Calcium (%)	0.17	Methionine	0.97
Phosphorous (%)	0.40	Phenylalanine	4.35
P Available (%)	0.36	Proline	4.28
Potassium (%)	0.10	Serine	4.28
Magnesium (%)	0.04	Threonine	3.16
Iron (ppm)	170.00	Tryptophan	0.87
Copper (ppm)	22.00	Tyrosine	3.11
Zinc (ppm)	17.00	Valine	3.92

Packaging/Delivery

ME-PRO is delivered in 55lb (25kg) paper bags that are lined with a 2 mil water barrier and heat-sealed.

ME-PRO is also available in 2,200lb (1000kg) super sacks.
